Problem Statement :-

(Theme - Education)
Fulfilling monetary and non-monetary requirements of government schools.

Proposed Solution :

- Creating a web portal on which the schools can post their requirements or any financial or non financial problem and any willing person/organisation can choose among the posted problems and donate as per the requirement like sponsoring mid day meals for a day etc.

- Due to limited resources it is not possible for the government alone to fulfil each and every requirement of every school and there are many people who are willing to do such noble work but due to lack of information and no available platform the are unable to do anything . So there should be a platform that can link such people and the school.
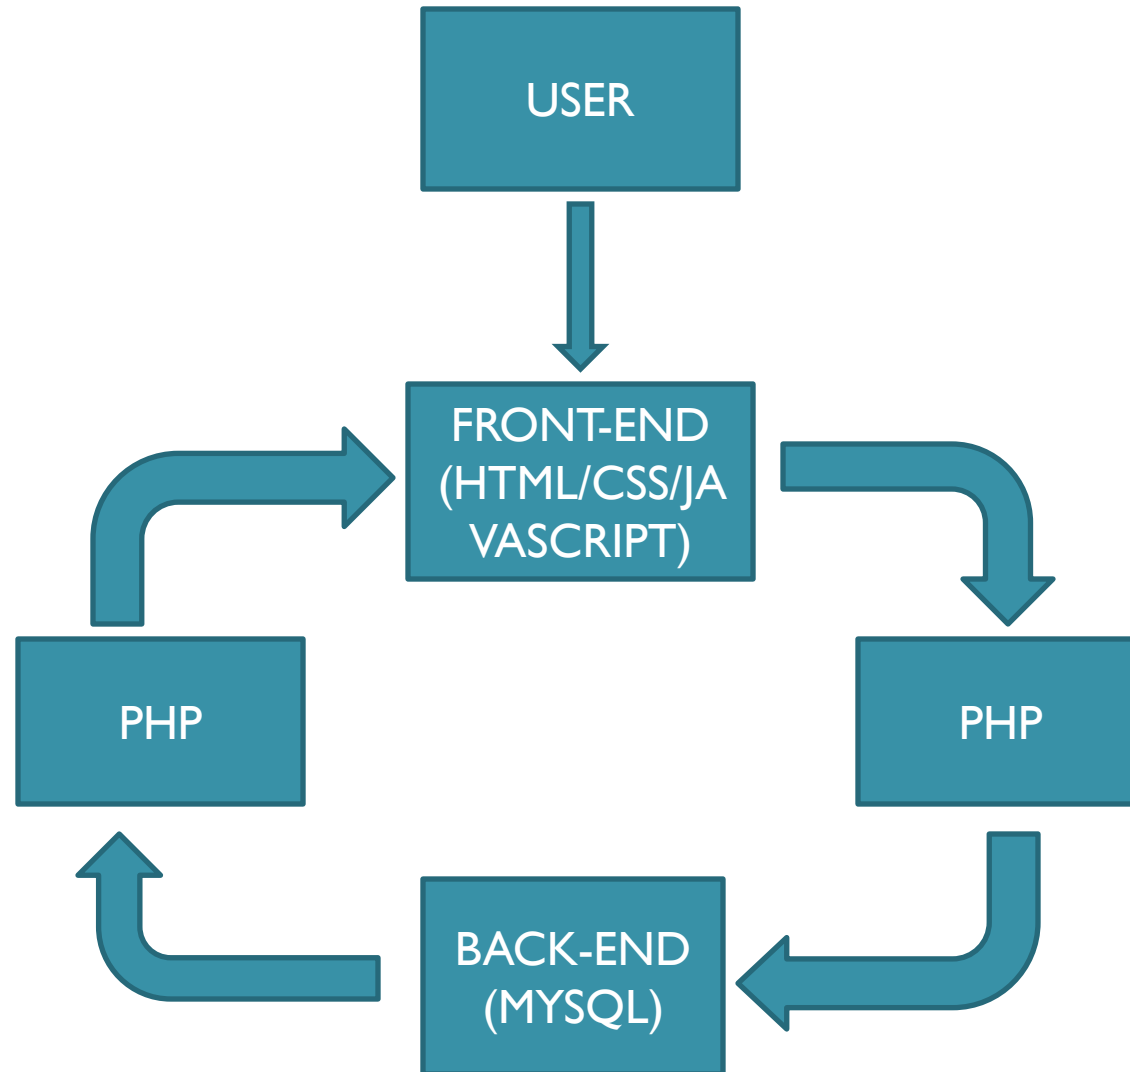

Proposed Solution :

- Besides monetary funding ,our website will also give users online platform to donate whatever they feel can be important for education purpose of the school.
- For eg:- donation of old books, sports equipments, benches etc;
- This will lead to accumulation of resources for the school leading to overall development of students.

Design Architecture :

Schools

Website

Donating Hands

Posting Requirements

Selecting From The Requirements

Accepting the help.

Fulfilling the needs.

Non –monetary help.
(Infrastructure / Old books /
Old Sports Equipments)

Technological Design Architecture :

Technology And Languages :

Front-End

- HTML
- CSS
- JAVASCRIPT
- JQUERY
- BOOTSTRAP
- AJAX
- SUBLIME TEXT EDITOR

Back-End

- PHP
- MYSQL
- XAMPP
